GIA Polska at the PETROL STATION International Fair

From 17th - 19th May, the 28th International Fair PETROL STATION took place in Warsaw, and GIA Polska was among the exhibitors. There were shown, for example, such products as Helix 6000 II dispenser equipped with the T-Media digital multimedia option, the Wayne Power UX 180 EV charger.

The International Fair PETROL STATION is a place to present current technologies and products in the fuel sector, as well as a platform for business meetings, information and experience exchange.

The moods, the weather and, of course, the multitude of meetings with clients and contractors were perfect. It was a very condensed three days when GIA Polska team drew on its decks of over 25 years of experience in the field of technology for petrol stations and cooperation with various partners.

This time GIA Polska presented: the second generation Helix 6000 II dispenser equipped with the T-Media digital multimedia option, the Wayne Power UX 180 EV charger, the OPW and ProGauge measuring systems and the Fusion dispenser controller.

T-Media, a digital multimedia solution synchronized with the distributor, enjoyed great interest. *"It provides what other static carriers don't - it gives the possibility of targeted promotion" - said Tomasz Brzozowski, Director of IT Services at GIA Polska. „This is a huge benefit for various promotional campaigns carried out in the forecourt, especially since this type of message guarantees establishing contact with the customer in real time and synchronizing it with the action at the dispenser."*

The number of questions regarding the technical aspects of presented devices, specifications and demonstrations of operation clearly shows how much interest there is in DFS technology.

Paweł Kalisz, General Manager GIA Polska: *"I highly appreciate the quality of the meetings during this fair, we have deepened our relations with key people from the petrol business, which is a good thing. On behalf of the whole team, thank you to everyone who visited us".*

About GIA Polska

GIA Polska has over 25 years of experience in selling fuel dispensers. GIA Polska is the sole supplier of Wayne distributors in Poland. It supports the design and construction of petrol stations in the field of maintenance services, fuel, LPG and electrical installations, cash register and fiscal systems. Also offer solutions for the distribution of AdBlue®, as well as the sale of control and measurement systems.
